Project Description:

This project include the following activities:

1. Construction of 12" main Pipeline;
2. construction of 6" pipeline;
3. Rehabilitation of Beit Ain El-maa' booster station including construction of 1400CM water Reservoir and procurement of two boosters and replacement of old pipes.
4. Procurement of two pumping units for Deir Sharaf and al-Bathan wells in Nablus city.
5. The project also included procurement of electrical devices and equipments (\$ 872,500).

The original components of the project were all completed; however, there were some savings from the project and it was reprogrammed to construct a round water reservoir (2000 CM) and 1300 LM 6" pipe line.

Objectives:

The project objective is to develop and Rehabilitate the water and Electricity Networks in Nablus City. Development of these networks will enable the Municipality to better manage their water and electricity services and provide more reliable services and reduce intermittent water supply and intermittent power supply.

Locations:

Nablus City /Nablus District

Products (as of end – May 2006):

- 12 " main transmission line is being constructed;
- 6" Main water line is being constructed
- Ain Beit El Maa is being rehabilitated and developed including construction of 1400 CM water Reservoir;
- Two wells' puming units were procured and operated
- Electrical equipment was procured and the electricity network is developed and enhanced
- Constructions works of the 2000CM and the 6' pipelines will start in June 2007;

Outputs:

- Improved water supply services for Nablus city residents;
- Improved capacity and reliability of electricity networks;
- Improved capacity of Municipality of Nablus regarding project management in general and water supply management in particular;
